Quality & Reliability S.A. Leads the Digital Modernization of Hellenic Railways Organization and Organization of Welfare Benefits and Social Solidarity (OPEKA)

Quality & Reliability S.A., one of the leading providers of IT and technology services in Greece, is taking on a key role in advancing the digital transformation of the public sector, with a strong focus on innovation, security, and efficiency.

Digital Breakthrough for **Hellenic Railways Organization** – New Information System for Railway Infrastructure.

With the goal of technologically upgrading the national railway infrastructure, Q&R is implementing a modern Maintenance Register Information System on behalf of the Hellenic Railways Organization (OSE), with a total budget of €876,000 (excluding VAT).

The new system will be fully aligned with the standards of the European Union Agency for Railways (ERA) and the RINF (Register of Infrastructure). It will include the documentation of all critical data, the development of software using SAP and Oracle APEX technologies, and interoperability with European databases via XML. This project lays the foundation for a safe and transparent operation of the railway network.

The contractual duration of the project is 12 months.

Digital Shield for OPEKA – Support for Critical IT Infrastructure

Quality & Reliability S.A. (QnR) has signed a contract with the Organization of Welfare Benefits and Social Solidarity (OPEKA), following a public e-procurement tender. The project involves the Development of Advanced Electronic Services, Interoperability, and Information Systems for Administrative Support and the Agricultural Home Account (ΛΑΕ). The total contract value amounts to €494,205 (excluding VAT), with a project duration of 22 months.

The scope of the project includes the design, development, installation, implementation, operation, and maintenance of an integrated information system, consisting of subsystems and applications that will interoperate internally and with external systems and institutions. Key components include:

- Development of the Administrative and Financial Support Information System
- Provision of advanced digital services for citizens, institutions, and partner businesses/suppliers

- Development of the Information System for Agricultural Home Programs (ΛΑΕ)

With these two strategic projects, Quality & Reliability further strengthens its position as a trusted technology partner of the Greek public sector, contributing decisively to the creation of a modern, efficient, and digitally mature state.
